

Product Information

CODE 5935

Description

ZINC STEARATE SW-100 POWDER

-	•	•	
Properties	Test	Specification	Typical Property
	Assay (%ZnO)	13.2 - 14.2%	13.7%
	Free Fatty Acid (%)	1 0% may	0.3%

Medium bulk density, fine white powder.

Features Zinc Stearate SW-100 Powder is produced from a high quality hydrogenated and

distilled fatty acid for applications requiring medium density processing aid with good flow and blending characteristics, including thermoset resins, polyolefins and

powdered metal.

Performance Consistent physical properties and medium density provide excellent blending and

dispersion properties with a large variety of materials.

Relatively large particle size and medium density contributes minimally to initial viscosity in SMC mixes, allowing for good glass wet out, while providing good

lubrication and surface quality in the molding process.

Engineered particle size enhances blending properties with powdered metal and

imparts consistent porosity for fabrication of self-lubricating components.

Quality Control A modern, state-of-the-art plant process with strict control ensures consistent quality

in chemical and mechanical properties.

Regulatory Meets FDA requirements under 21CFR 178.2010 and Regulation Directive (EU)

10/2011 for additives used in plastic materials and articles intended to come into

contact with foods.

In accordance with Regulation Directive (EU) 10/2011; the specific migration limit (SML) of zinc salts has to be observed, no fat consumption reduction factor (FRF) has to be observed and no component contained therein should be considered as a

dual use additive in accordance with, Article 11 (3a)...

Packaging Standard 40 x 50 lb. multiwall bags on stretch wrapped pallet. Bulk packaging in

supersacks is available.

Storage in dry areas at normal ambient temperatures is recommended. Open

containers of unused product should be firmly closed for storage.
