

C9-11 Acids

product identification

| | |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description | The C9-C11 Acids are high purity, conjugated drying oil acids for alkyd resins, epoxy esters and copolymers requiring a combination of flexibility, adhesion, baking speed, color retention, chemical resistance, mar resistance and water resistance. The 9-11 Acids contain a negligible amount of linolenic acid, a yellowing factor, and a combined oleic and saturated acid content of less than 10%. There are no rosin acids or unsaponifiable matter present. |

typical properties

| | |
|-------------------------------|----------------------|
| Molecular Weight | 281 |
| Appearance | Clear, bright liquid |
| Acid Value | 200 |
| Color, Gardner | 1 |
| Viscosity, cP @ 25 °C | 30 |
| Hydroxyl Value | 7 |
| Iodine Value | 153 |
| Moisture, % | 0.1 |
| Saponification Value | 200 |
| Specific Gravity, 25 °C/25 °C | 0.903 |
