Profile**Product properties**

Polyglykol D 21/300 is a clear neutral viscous liquid at room temperature. Polyglykol D 21/300 is soluble in water and polar organic solvents like acetone or methanol at room temperature. It is insoluble in pure hydrocarbons. Polyglykol D 21/300 displays a very low solidification point of -38°C and no evaporation loss even at temperatures as high as 100°C . The viscosity of Polyglykol D 21/300 corresponds to ISO VG 460 class. The hygroscopy of polyglycols increase with the EO ratio in the polymer.

Application

Based on their physical and chemical characteristics D 21-type polyglycols are used for a wide variety of applications.

Fields of industrial application:

- Base oil component for high performance lubricants with low friction coefficients, excellent wear properties and good thermal stability
- Lubricant for high pressure compressors
- Water soluble, lubricating component of metalworking fluids, e.g. fully synthetics
- Component of auxiliaries for leather and textile processing
- Defoamer for food and non-food applications
- Reactive alcohol component in chemical reactions
- Solvent and humectant for dyes and inks
- Heat transfer medium

Sustainability

Polyglykol D 21/300 is readily biodegradable. It is included in the LuSC-list (Lubricant Substance Classification list) and meets the EU Ecolabel criteria for lubricants (Commission decision 2018 / 1702 / EU).

Safety

Please see Material Safety Data Sheet before handling the material.

Storage behaviour

When stored in a cold, dry place in a closed container Polyglykol D 21/300 can be kept for at least two years.
