

The Goodness of Hemp Fiber

Hemp Bast Fiber & Product Capabilities

IND HEMP fiber is the perfect starting point to connect “eco” with industry. Hemp bast fiber from IND HEMP is decorticated, clean and ready for integration into textiles, non-wovens, bio composites and more. Hemp is the strongest natural fiber and is a good sustainable rotation for our farmers.

IND hemp contracts both purpose-grown fiber as well as dual-purpose grain and fiber where we up cycle the residual straw from the super food grain crop.

IND HEMP has a state-of-the-art hemp processing operation at Fort Benton, MT.

Hemp bast and hurd fiber are produced through *decortication*, the process where a hemp stalk is physically separated and cleaned. Our IND HEMP processing line is capable of handling up to 5 tons of raw stalk per hour.

Good for a variety of uses, in a variety of markets.

- Textiles
- Automotive
- Construction materials
- Composites
- Erosion Control
- Pulp & Paper

Contact us to discover how our hemp capabilities can help meet your goals.

IND HEMP BAST FIBER CAN BE PROCESSED IN A VARIETY OF FORMATS FOR USE IN DIFFERENT APPLICATIONS:

MONTANA PLATINUM

MONTANA GOLD

MONTANA BRONZE

SHORT FIBER BLEND

OVERVIEW

The process starts by separating the outer bast fiber from the inner woody core of the stalk. The fiber is then cleaned and baled in preparation for a variety of uses.

Applications:

- Woven and knit; apparel, home furnishings
- Nonwovens
- Insulation; building & freight
- Spunlace; wipes, feminine hygiene
- Erosion blankets, waddles & hydromulch / Felts
- Specialty papers, molded fiber

Benefits:

- Strong and durable
- Rapidly renewable material
- High specific properties (composites)
- Sustainably grown & processed in the USA
- Absorbent, lightweight

PRODUCT SPECIFICATIONS

Bale Size: 54" x 48" x 28" • **Bale Weight:** ~500 lbs. bales
Short Fiber Blend delivered in Supersacks
